Full Stack Developer

Web & Mobile Developer

Data Analyst

Automation Engineer

Fields: IT / Software,
FinTech, Trading & Forex,
Economics

Preferred Locations:

Riyadh, Abu Dhabi, Dubai

Marios Eleftheriou

Junior Full-Stack & Mobile Developer (Next.js / React Native / Flutter) | FinTech & Forex Enthusiast

PERSONAL SUMMARY

Highly motivated Software Engineer with hands-on experience in full-stack development, API integrations, and cloud deployment. Currently contributing to IANUS Technologies, handling end-to-end development from front-end UI with Next.js and React to back-end services with Django and Supabase, deployed on Hetzner and Vercel infrastructure. Skilled in coordinating with third-party platforms, troubleshooting complex systems, and delivering scalable, production-ready applications.

Beyond my professional role, I've delivered multiple personal projects including a commercial e-commerce platform, cross-platform mobile apps, and a fully automated AI-powered trading pipeline. I have advanced expertise in AI that goes well beyond standard usage, working with the latest tools, MCP servers, integrations, and AI-driven workflows to build real-world automated systems.

Actively studying macroeconomics and global financial systems, conducting fundamental research on currency markets, and developing systematic forex trading strategies with the goal of becoming a consistently profitable trader.

I genuinely enjoy learning new things and picking up new technologies, so whatever challenge or project I'm put on, I'm eager to dive in and get up to speed quickly.

Pursuing a Bachelor's degree in Informatics at New Bulgarian University with a strong academic record (GPA 5.12/6), graduating July 2026.

WORK EXPERIENCE

Software Engineer - IANUS TECHNOLOGIES LTD

January 2025 – Present | Cyprus, Larnaca

- Full-stack troubleshooting across front-end rendering, back-end API, and database query optimization, resulting in improved application performance and reduced load times
- Coordinated with third-party platforms (Vercel, Supabase) to ensure smooth integration into scalable development environments
- Designed and implemented API integrations and authentication systems using JWT, Django, and Supabase Auth, securing multiple production applications
- Led Git/GitHub version control workflows, establishing branching strategies and code review processes that streamlined collaborative development
- Built responsive UI/UX for front-end applications using Next.js and React, improving user engagement metrics and cross-device compatibility
- Architected and deployed back-end services on Hetzner using Next.js, implementing CI/CD pipelines that improved deployment speed and reliability
- Currently building a business management mobile app to improve team coordination, streamline internal communication, and centralize day-to-day operations

Key Projects (Personal)

- Built **waterflitternet.com** - a full commercial e-commerce platform with Next.js featuring admin dashboard, shop management, product listings, user accounts, order tracking, inventory management, and analytics
- Contributed to the **Choirokoitia heritage site** mobile app (Flutter) for Android and iOS with bilingual English/Greek content
- Built a **chess game** published on itch.io using Unity
- Actively developing a **SaaS CMS website builder** with built-in staff management tools for local businesses
- Built a fully automated **AI trading pipeline** that monitors live news, parses macroeconomic data, incorporates custom indicators, and autonomously executes trades

EDUCATION

Bachelor's Degree in Informatics

NEW BULGARIAN UNIVERSITY | Bulgaria | Oct 2022 - July 2026 | Grade: Very Good

- GPA: 5.12 out of 6
- Relevant coursework: Software Engineering, Database Systems, Web Technologies, Data Structures & Algorithms

HOBBIES

Video Editing | Chess | Sports | Financial Markets & Forex | Macroeconomic Analysis | Risk Management & Position Sizing
